Education

FAST-NUCES, Karachi | Aug 2022 - June 2026

B.Sc. Computer Science

Datacamp Certifications | 2026

[LLM Concepts](#) | [AI Agents](#)

Technical Profile

Full-Stack Software Developer with expertise in designing and deploying scalable web applications and integrating AI backend systems using Python, Javascript/Typescript, SQL/NoSQL databases (MySQL, PostgreSQL, VectorDB, Redis) and AI based architectures. Strong foundation in software design & architecture, database management, testing, and APIs building high-performance solutions to frontend Integration and cloud deployment.

Key Skills

Languages: C/C++, C#, Python, JavaScript/TypeScript, HTML5, CSS3, Java

Frameworks : Flask, FastApi, Dotnet, Angular, MERN Stack, Nest.js, Pandas, Numpy, Playwright.

Data & DB: MySQL, PostgreSQL, MongoDB, VectorDB, Redis, Prisma, ETL, Data Analytics & Preprocessing.

Software development & AI : OOP, Data Structures , Software Design & Architecture, SDLC, RESTful APIs, JWT Auth, SQA, LLMs, RAG, Generative AI.

Tools: VS Code, Cursor, Git/ Github, SQL Server, MS Dynamics , Power BI.

Experience

Data Analyst and BI Intern

J. Junaid Jamshed Pvt. Ltd. | Jun – Aug 2025

- Developed 8+ interactive Power BI dashboards for sales, vendor, and financial reporting to support management decision-making.
- Engineered automated data pipelines over large-scale ERP datasets, transforming raw structured data into reporting-ready formats for business decision-making.
- Built financial reporting dashboards for the MIS and Finance teams to deliver actionable business insights.
- Implemented custom DAX measures and KPIs to track key metrics across ERP data sources.

Projects

AI-Based Interview Assistant (*Final Year Project*) – live at intellihire.com.pk

Python(Flask), React, TypeScript, ChromaDB, LangChain, OpenAI API, SQL, Phpmyadmin, AI/ML, RAG

- Built an AI-powered system to automate candidate screening, generate **evaluation reports**, and enhance hiring decisions through bias-aware analysis.
- Developed a **R etrieval-Augmented Generation (RAG)** pipeline using **LangChain** and **ChromaDB** for context-aware question generation and response evaluation.
- Integrated **MediaPipe** for gaze tracking, head pose estimation, and attention monitoring during interviews.
- Utilized **YOLOv8** object detection models for multiple-person detection, prohibited object detection (e.g., mobile phones), and suspicious activity monitoring.
- Implemented real-time **STT/TTS pipeline(ElevenLabs)**, AI answer evaluation, multi-modal candidate scoring, and AI-driven **proctoring**.

Car Showroom App-Full Stack

Python(Flask), ReactJs, SQL, phpMyAdmin

- Developed a full-stack showroom management system using **Flask**, **ReactJS**, **SQL**, and phpMyAdmin to manage vehicle inventory, customer inquiries, and test-drive bookings.
- Designed and implemented a relational database schema with **normalization**, **primary/foreign key** constraints, **joins**, indexing, and **CRUD** operations to ensure data integrity(**ACID**) and efficient query performance.

Document Intelligence Platform – Full Stack

Next.js, NestJS, FastAPI, PostgreSQL, LangChain, pgvector

- Developed a full-stack AI document platform using **NestJS**, **FastAPI**, and **PostgreSQL** to upload PDF/DOCX files, auto-summarize content, and chat with documents via natural language.
- Built a RAG pipeline with **LangChain**, **pgvector** vector search, document chunking, and **WebSocket** streaming to deliver context-aware answers with page-level source citations across single and multi-document queries.
